

BIRLA INSTITUTE OF TECHNOLOGY & SCIENCE, PILANI
PRACTICE SCHOOL DIVISION

Date: 06-02-2026

ATTENTION: A3, A8, AA, A7 (DD students who are eligible and interested in doing PS II during First Semester 2026-2027 and Second Semester 2026-2027)

SUBMISSION OF RESUME FOR PS II - FIRST SEMESTER 2026-2027 at Intel Software, Bengaluru

Applications are invited from interested students for their PS-II at Intel Software, Bengaluru during the First Semester 2026- 2027. Students who are interested in pursuing PS-II at Intel Software, Bengaluru during the First Semester 2026-2027 are advised to submit their resume on or before **09:00 AM of February 09th, 2026**. Students are required to prepare their resume in the .pdf formats only and it should be named as <idno_IntelSW> (e.g. 2022B1A30601P_IntelSW.pdf). The resume should be sent via Google Form. A hard copy of the resume is not required.

While the PS Semester allotment process is yet to begin and since Intel, Bengaluru has a deadline to apply, interested students can submit the resume and then the PS Division will work with Intel, Bengaluru on the selection process and final allotment. Selected students will have an opportunity to work at Intel, Bengaluru, for PS-II in both semesters (double semester PS), and their semester allotment will be finalized accordingly. Students eligible for both semester and ready to do PS at Intel, Bangalore during both semesters only should apply.

Google Form: <https://forms.gle/DsmrEQW5TBbs1ct7A>

CGPA cutoff: 7 and above

Stipend per month (INR): 45,000

Job Description for Software Roles

Phy Systems Engineer

Supports the design and development of systems and solutions that integrate silicon components, board, and software to meet customer requirements for a specific product segment. Assists in system level troubleshooting, network design, and root cause analysis of failures. Collaborates with engineering teams to ensure system reliability and performance across diverse use cases. As an intern, learns and applies knowledge, builds skills, and explores future career opportunities through hands on experience and projects that support Intel business goals in a collaborative environment.

SW Engineer Intern

Contributes to the creation of integrated software solutions tailored to customer and platform needs, combining system level understanding with application development. May assist in solution architecture, feature prototyping, and performance analysis across diverse workloads and environments. Collaborates with hardware, firmware, and customer engineering teams to deliver scalable and optimized solutions. As an intern, learns and applies knowledge, builds skills, and explores future career opportunities through hands-on experience and projects that support Intel business goals in a collaborative environment.

Software Intern

Contributes to the design, development, validation, and debugging of embedded software across various domains including BIOS, microcontrollers, and/or memory systems. Works on system level modeling, algorithm development, and/or hardware software integration, often within constrained environments involving timing, memory, and processing limitations. May also assist in architectural decisions, validation planning, and performance benchmarking. Collaborates with architects, engineers, and designers to ensure robust firmware solutions. As an intern, learns and applies knowledge, builds skills, and explores future career opportunities through hands-on experience and projects that support Intel business goals in a collaborative environment.

Firmware Development

Develops Firmware with a direct interface to hardware including microcode, IP specific firmware, FPGA, and DSPs. Responsible for designing and implementing interfaces that abstract low level hardware details from higher levels of software and firmware, performing design and code reviews, as well as testing and validating product implementations.

Familiarity with IA-32 instruction set enhancements would be an added advantage

- Demonstrated C coding skills and/or experience
- Background in modern processor micro architecture and computer systems architecture
- Knowledge of internal of Operating System (OS) would be an added advantage
- Demonstrated vision for continuous validation improvements

Key points:

- The resumes will be sent to the organization. Organization will select students either on the basis of resume or on the basis of the test/interview.
- Selected students **should NOT drop out** at the later stages. **It is understood that, as you are applying for this opportunity out of your interest, you will do your PS II at this organization, if you get SELECTED.**
- "Allotment of a student to a station depends on the station that gives the result, first. Once a student gets selected, he/she will be moved out of PS process from other stations automatically." The decision of Dean, PS is final in this regard.
- If a student is applying for more than one station through this notice process and gets selected in both then the final station allotment will be decided by PSD. The decision of Dean, PS is final in this regard.

Associate Dean,

Planning and Development Cell, Practice School Division
