

Senior Full Stack Engineer

Company: InnovateTech
Solutions

Location: San Francisco, CA
(Hybrid)

Department: Core Product
Engineering

JOB DESCRIPTION

We are seeking a Senior Full Stack Engineer to lead the evolution of our core enterprise SaaS platform. In this role, you will be responsible for breaking down legacy monolithic architectures into scalable, high-performance microservices and crafting intuitive, responsive front-end user experiences. You will collaborate closely with product managers and system architects to design real-time data streaming features and maintain a highly automated, secure CI/CD pipeline.

KEY RESPONSIBILITIES

- Architect, develop, and maintain robust, scalable web applications using React, Next.js, and Node.js.
- Lead the migration of legacy services to a modern microservices architecture to improve page performance, API latency, and system reliability.
- Design and implement real-time, low-latency features utilizing WebSockets, Redis caching, and event-driven backends.
- Optimize relational and non-relational database models (PostgreSQL, MongoDB) for complex querying and high data volumes.
- Establish engineering best practices, including writing clean, maintainable code, conducting comprehensive code reviews, and mentoring junior to mid-level engineers.
- Own and optimize cloud infrastructure deployments on AWS, leveraging Docker, Kubernetes, and GitHub Actions for continuous integration.

REQUIREMENTS & QUALIFICATIONS

- **Experience:** Minimum 5+ years of professional software engineering experience in a fast-paced environment.
- **Frontend Mastery:** Deep proficiency in JavaScript, TypeScript, React, Next.js, HTML5, and CSS3.
- **Backend Expertise:** Extensive backend experience with Node.js/Express, Python (Django), or Go.
- **Cloud & DevOps:** Strong understanding of AWS services (S3, EC2, Lambda), containerization (Docker, K8s), and automated testing frameworks.
- **Education:** Bachelor's degree in Computer Science, Engineering, or a related technical field.
